

# microlene purified water

- ✓ Giardia Safe\*
- ✓ Reduces Chemicals\*
- ✓ Reduces Lead, Aluminium and Asbestos\*†
- ✓ Retains Beneficial Minerals\*

† 2HK Model only  
\* When used in accordance with our operating instructions.

## Why have thousands of people all over Australia and New Zealand switched to Microlene purified water?

Because many water supplies contain Chlorine and dissolved Aluminium. Research has shown that both carcinogenic chlorination by-products and exposure to aluminium in drinking water may cause significant and ongoing health problems. Many water supplies are carried by pipes containing asbestos.

Microlene purifiers reduce chlorine, pesticides, sulphur, sediment, rust, algae, bad odours, asbestos, aluminium†, lead† and also filter cysts such as giardia and cryptosporidium.\*

Microlene purified water... with all the beneficial minerals retained.

† 2HK model only  
\* When used in accordance with operating instructions
